GIS for Geotechnical Professionals

*Presented by Colin Mazengarb Senior Geologist
(Natural Hazards and Engineering Geology)
Mineral Resources Tasmania/Tasmanian Geological Survey*

Colin is an engineering-geologist currently based in Hobart with over 20 years of GIS experience.

His presentation will be illustrated with examples of geotechnical work he has undertaken in Tasmania and New Zealand, including mine subsidence, landslide zoning, debris flow and rock fall runout modelling. Using these examples, Colin will outline some of the more recent developments in GIS.

His presentation is a prelude to the 'GIS for Geotechnical Professionals' course he has developed in association with NZGS.
